

VECTR v6.0.3 Feature Breakdown

Table of Contents

MITRE Enterprise ATT&CK v8.1 support	2
MITRE ATT&CK Navigator v4.0 support	4
Phase and Kill Chain Sorting Improvements	6

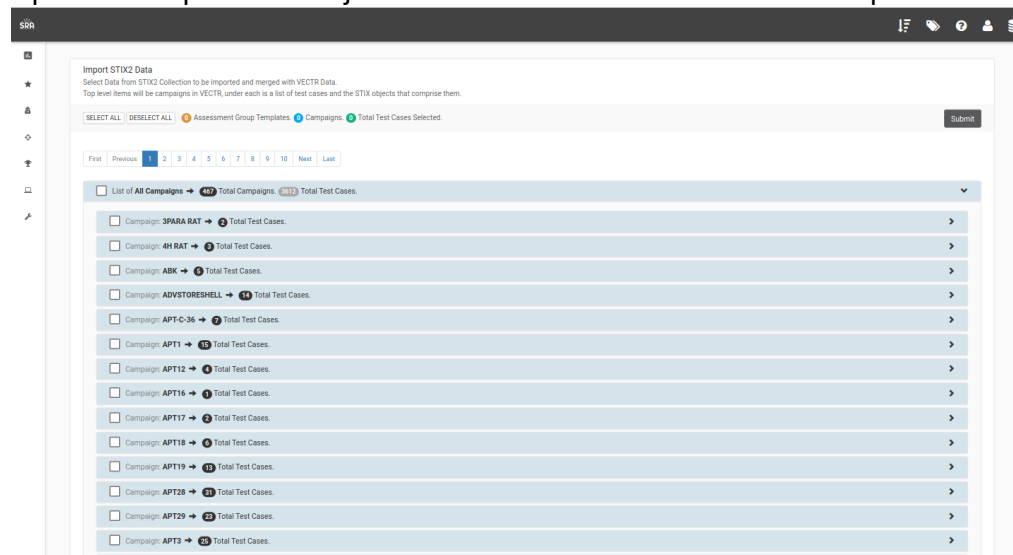

MITRE Enterprise ATT&CK v8.1 support

What is it?

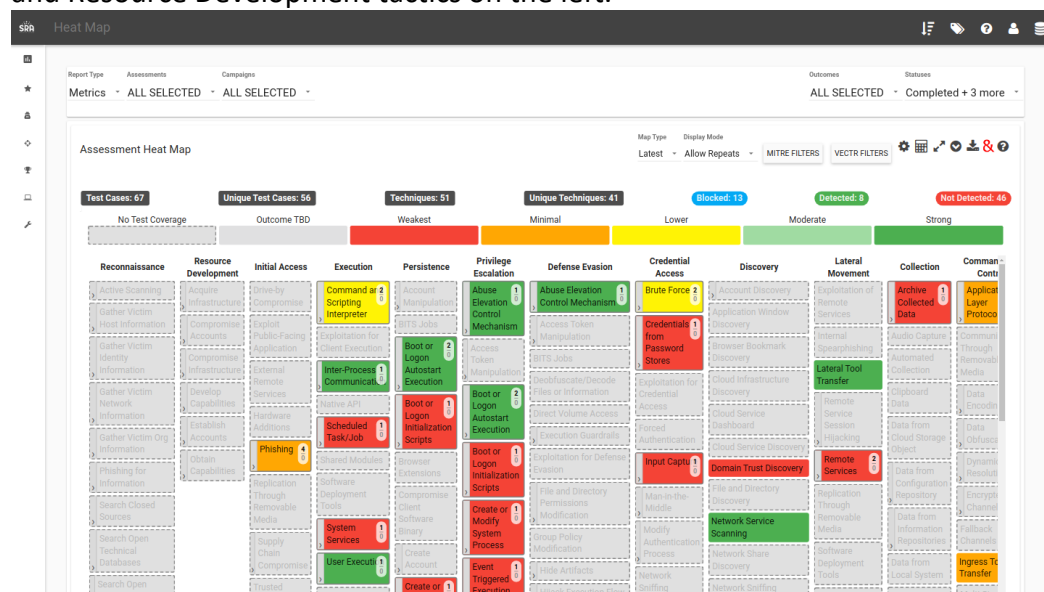

Support has been added for the latest version of MITRE Enterprise ATT&CK CTI data. This includes additional Heatmap cells and columns for the added Tactics and Techniques as well as support for importing updated MITRE CTI data from the Enterprise ATT&CK CTI GitHub page.

How does it work?

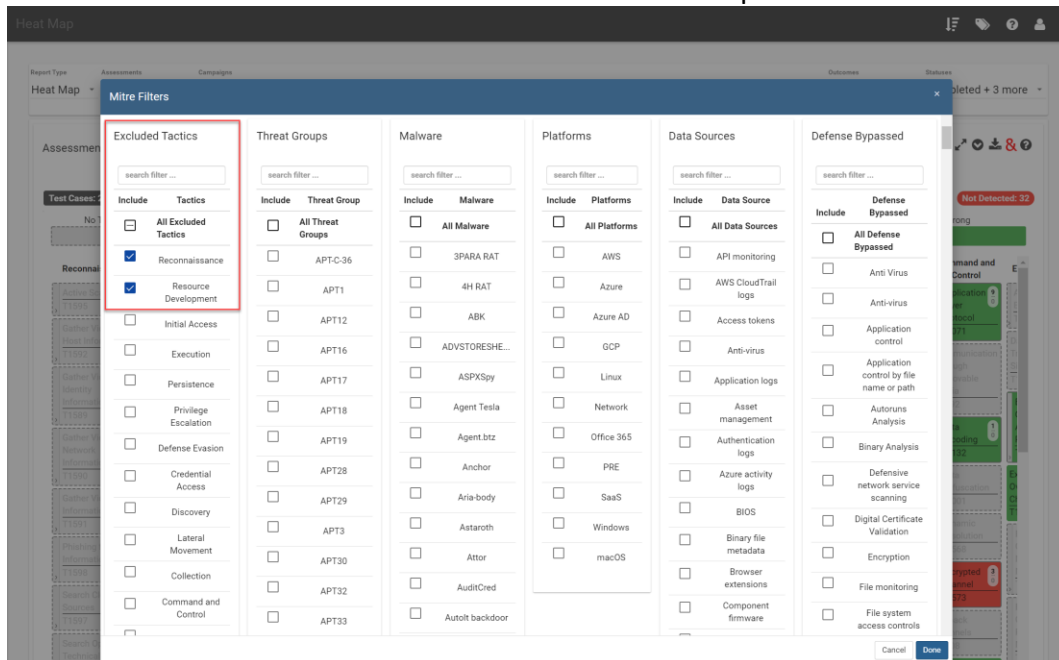

Upload enterprise-attack.json to VECTR from Administration -> Import Data -> File Import:

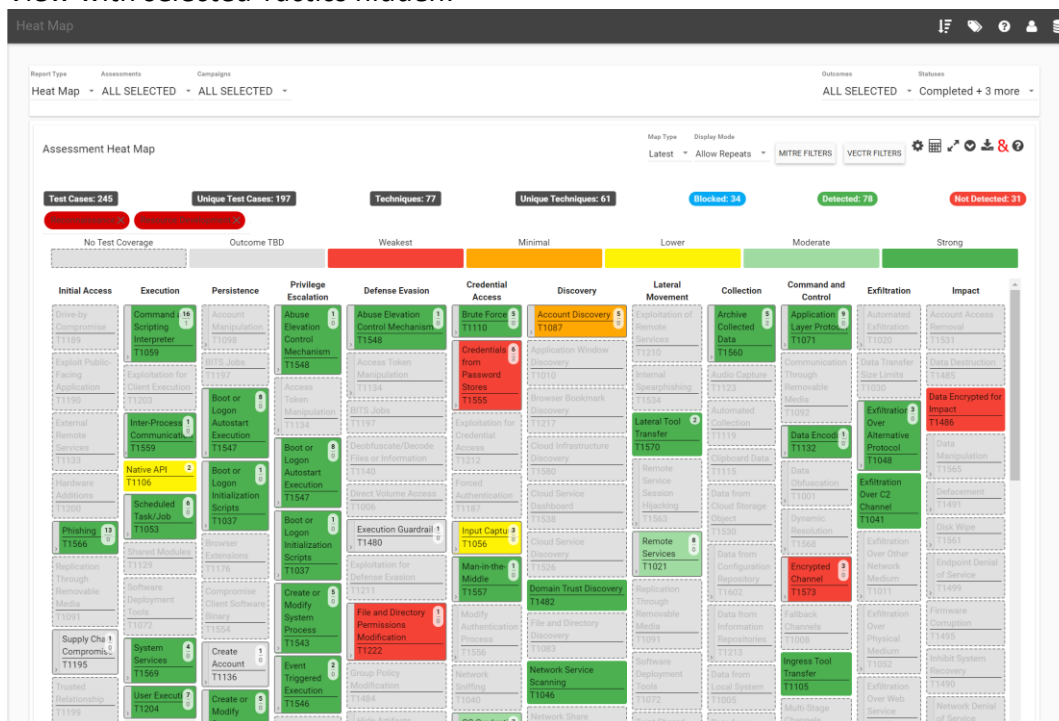

Visualize detection data on the updated Heatmap – Note the addition of the Reconnaissance and Resource Development tactics on the left.

In the example above there are currently no test cases in the system mapped to the new tactics and associated techniques. If you wish to hide these tactics in your heat map view there is a new “Excluded Tactics” filter within the MITRE FILTERS options.

View with selected Tactics hidden:

MITRE ATT&CK Navigator v4.0 support

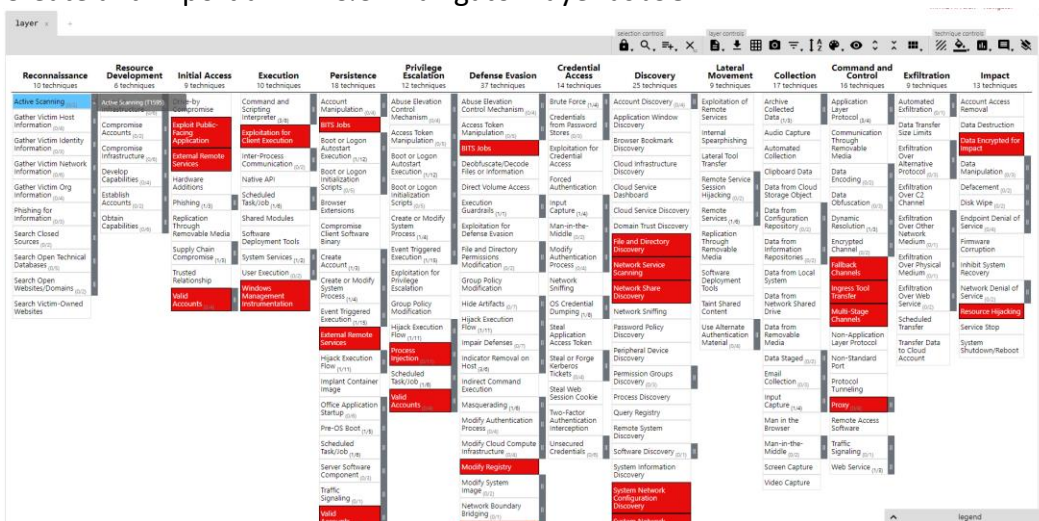

What is it?

Support has been added for the latest version of MITRE ATT&CK Navigator. Note that only the enterprise-attack domain is supported. VECTR does not support the mobile-attack layer or other Navigator domains.

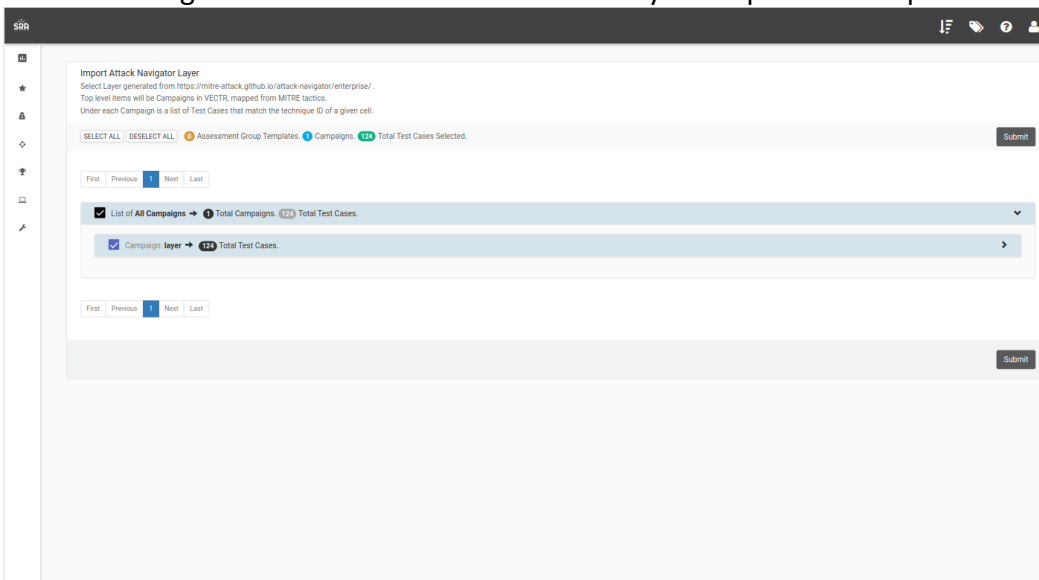

How does it work?

VECTR Enterprise ATT&CK Navigator Import

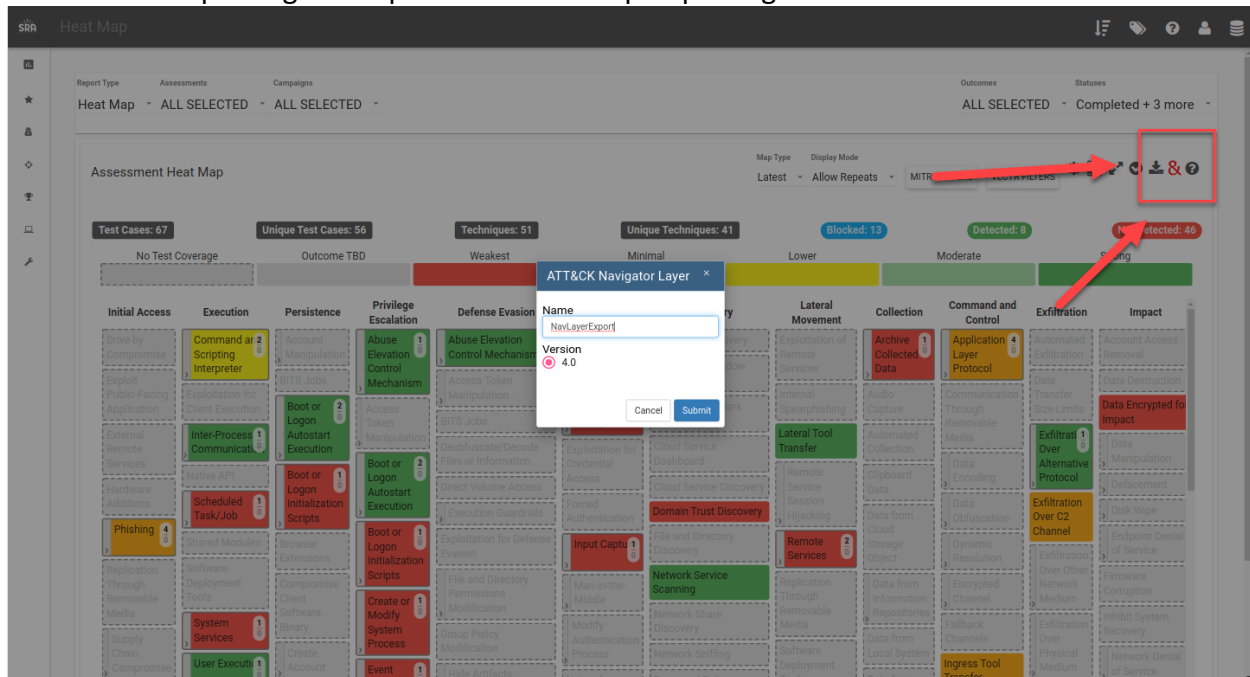

1. Create and Export an ATT&CK Navigator Layer as JSON

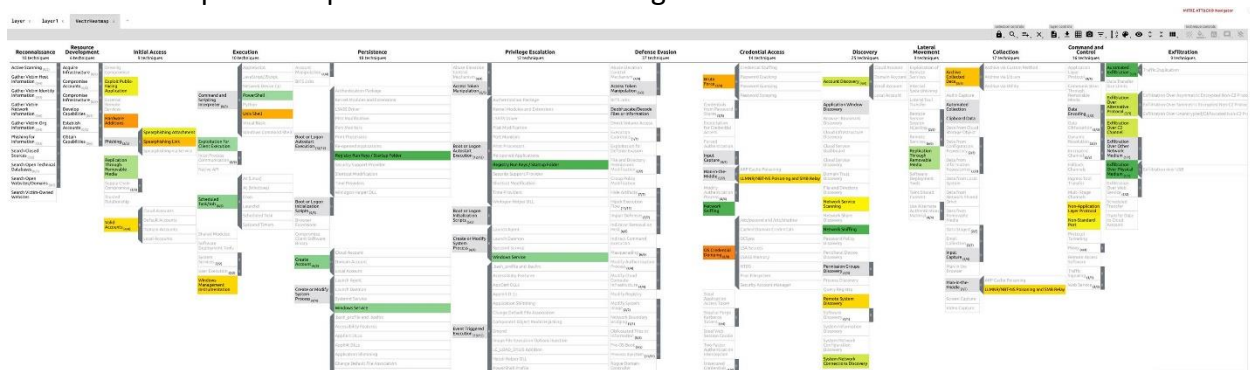

2. In VECTR navigate to Assessments -> From Nav Layer -> upload the exported JSON

VECTR Heatmap Navigator Export from Heatmap Reporting Screen

VECTR Heatmap Data Imported into ATT&CK Navigator

How can this feature help me?

VECTR now supports the latest ATT&CK Navigator version for planning and visualizing Assessment data.

Phase and Kill Chain Sorting Improvements

What is it?

Phases can now be ordered on a per Kill Chain basis. This impacts the order of Phases on various reporting screens and charts.

How does it work?

Navigating to Administration -> Kill Chains and clicking the edit button brings up sort controls
