Enhanced Security Configuration Options	2
Improved Support for File Import	4

Enhanced Security Configuration Options

What is it?

VECTR now support enhanced security configuration features, including MFA with TOTP support and enrollment with popular apps such as Microsoft Authenticator , minimum requirements for a password, and account lockout.

How does it work?

Administrators can access the configuration screen through the Administration -> Security Configuration Screen.

The screenshot shows the 'Security Configuration' screen in the VECTR administration interface. The interface has a dark header bar with the 'VECTR' logo and 'Security Configuration' text on the left, and a top navigation bar with icons for settings, help, user, and a menu. A left sidebar contains icons for home, star, lock, expand, wrench, list, and edit. The main content area is titled 'SETTINGS' and contains three sections: 'Multi-factor Authentication', 'Password Policy', and 'Account Lock Out Policy'. The 'Multi-factor Authentication' section has a toggle for 'Require MFA on local accounts'. The 'Password Policy' section has a toggle for 'Enforce password complexity', a 'Minimum Password Length' slider, and checkboxes for 'Uppercase', 'Lowercase', 'Numbers', and 'Symbols'. The 'Account Lock Out Policy' section has input fields for 'Failed login attempt threshold', 'Failed MFA attempt threshold', 'Duration of lock out', and 'Reset counter duration', each with a descriptive subtext. A 'SAVE' button is at the bottom left.

VECTR Security Configuration

SETTINGS

Multi-factor Authentication

Require MFA on local accounts ☐

Password Policy

Set the password complexity requirements for local accounts.

Enforce password complexity ☐

Minimum Password Length

☐ Uppercase ☐ Lowercase ☐ Numbers ☐ Symbols

Account Lock Out Policy

Set the account lock out policy for local accounts.

Failed login attempt threshold:

Number of failed login attempts before the account is locked.

Failed MFA attempt threshold:

Number of failed MFA code verification attempts before the account is locked.

Duration of lock out:

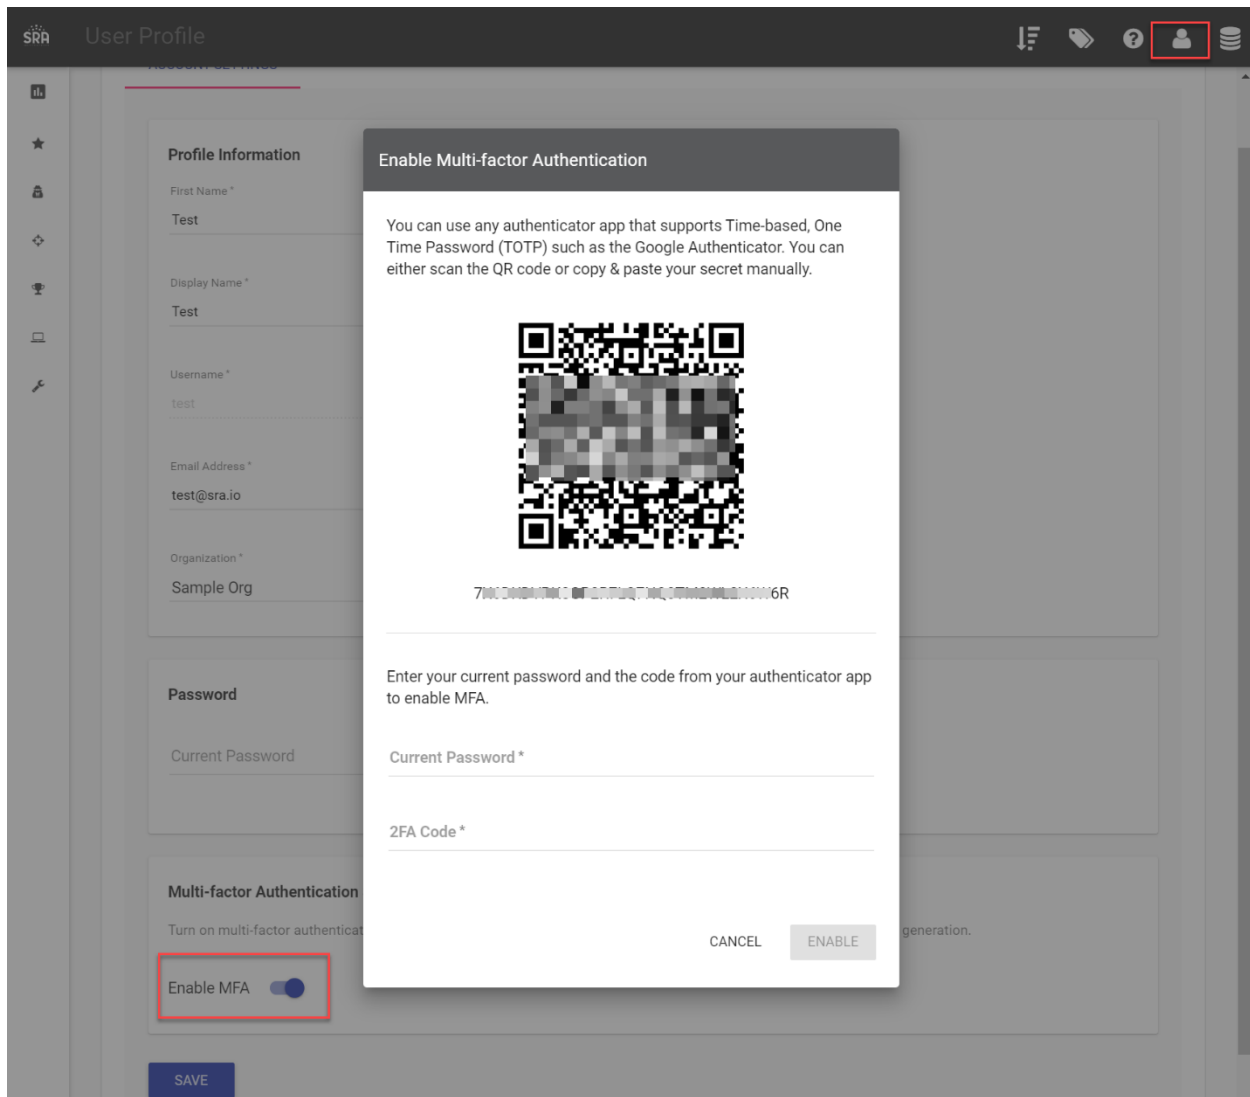

Number of minutes a locked-out account remains locked out before automatically becoming unlocked. If set to 0, the account will be locked out until an administrator explicitly unlocks it.

Reset counter duration:

Number of minutes from the last failed attempt that must elapse before the lock out counter is reset to zero. This reset time must be less than the account lockout duration.

SAVE

MFA can also be enabled for individual users from the user profile menu.

How can this feature help me?

This will allow Administrators to enforce MFA, password complexity and account lockout for VECTR users.

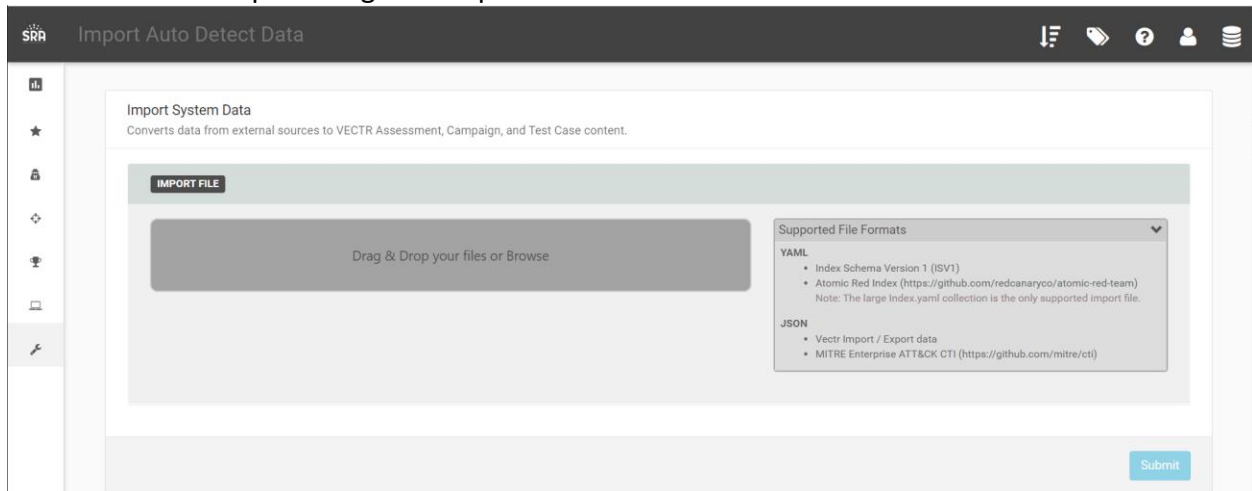

Improved Support for File Import

What is it?

Merged all supported filetypes into a single panel under Administration -> Import Data -> File Import

How does it work?

You can use the import widget to import data from various sources.

How can this feature help me?

Imported data will create Administration templates that can be used in future Assessments. This screen provides additional information on what file types are currently supported for imports and feedback to the user on content types successfully identified and parsed.
